

Workers' Compensation Cost Reduction

Business Problem

A small manufacturing and installation company (65 employees) – suffering from high workers' compensation insurance costs.

Solution

After an analysis, it was determined that the organization's safety and health program could be improved and re-imaged (for the workers' compensation insurance carrier). We developed a company-specific safety and health program by incorporating the efforts of an **On-Site Part-Time Safety Consultant**.

Outcome

For about a \$12,000 investment (for our **Part-Time Safety Consultant**), the company reduced its following year's workers' compensation costs by \$55,000 (reduced rates and credits given for safety efforts). Injuries were also reduced, and the workplace was improved.
